

# The Apple Never Falls Far From The Tree!

Just one look at their mother, Beverly, and it's easy to see where daughters, Katey-Ann, Rachel, and Paige Scurpa get their gorgeous looks!

Unfortunately blonde hair and pretty eyes are not the only things that children can get from mom and dad. Most orthodontic problems are inherited, including jaw size and tooth size discrepancies. These problems lead to crowding or excess spacing of the teeth. Overbites, underbites, extra or missing teeth, and other abnormalities of the jaws

and face can also be inherited.

We work with families all the time. We like to screen kids for orthodontics as early as age 7. However, when or if orthodontic treatment should begin, depends on the type and severity of the problems noted.

If you suspect your child may have an orthodontic need, or if you yourself would like a nicer smile, give our office a call today. Orthodontic treatment is affordable and it is still one of the best investments out there!

*"When I started looking for an orthodontist, 'Dr. G' came highly recommended, and once I visited the office, I understood why! My experience as a patient was so delightful that my 3 daughters have all been patients. Every chance I get, I recommend his office to others," says Beverly Scurpa, Sharpsville*

*"I LOVE my smile!"  
— Katey-Ann (16)*

*"Everyone compliments me on my smile!" — Rachel (15)*

*"I am confident that my smile will be something that I will be proud of!" — Paige (14)*

Standing, left to right, Rachel, Paige and Katey-Ann with mom Beverly.
